Stacy Wallstein, Teacher  
Lauren Gimon, Supervisor

**Spring 2015**

## Math 7

### I. Course Synopsis

In Grade 7, instructional time should focus on four critical areas: (1) developing understanding of and applying proportional relationships; (2) developing understanding of operations with rational numbers and working with expressions and linear equations; (3) solving problems involving scale drawings and informal geometric constructions, and working with two- and three-dimensional shapes to solve problems involving area, surface area, and volume; and (4) drawing inferences about populations based on samples.

### II. Philosophy & Rationale

The purpose of the math curriculum for seventh grade is to help students develop and enhance mathematical abilities. Students should be able to reason logically and apply mathematical skills to real-world activities. Communicating about and through mathematics will enable students to view mathematics as relevant to their lives and understand it as it connects to other areas. Students should be able to make connections among the different strands of mathematics while feeling confident in using quantitative and spatial information to make decisions. The curriculum will enable students to become independent learners with a desire for lifelong learning. Technology will be infused through the curriculum.

The Standards for Mathematical Practice describe varieties of expertise that mathematics educators at all levels should seek to develop in their students. These practices rest on important “processes and proficiencies” with longstanding importance in mathematics education. The first of these are the NCTM process standards of problem solving, reasoning and proof, communication, representation, and connections. The second are the strands of mathematical proficiency specified in the National Research Council’s report *Adding It Up*: adaptive reasoning, strategic competence, conceptual understanding (comprehension of mathematical concepts, operations and relations), procedural fluency (skill in carrying out procedures flexibly, accurately, efficiently and appropriately), and productive disposition (habitual inclination to see mathematics as sensible, useful, and worthwhile, coupled with a belief in diligence and one’s own efficacy).

#### **MATH.PRACTICE.MP1 - Make sense of problems and persevere in solving them.**

Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information

they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects or pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, "Does this make sense?" They can understand the approaches of others to solving complex problems and identify correspondences between different approaches.

**MATH.PRACTICE.MP2 - Reason abstractly and quantitatively.**

Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to *decontextualize*—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents—and the ability to *contextualize*, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand; considering the units involved; attending to the meaning of quantities, not just how to compute them; and knowing and flexibly using different properties of operations and objects.

**MATH.PRACTICE.MP3 - Construct viable arguments and critique the reasoning of others.**

Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments.

**MATH.PRACTICE.MP4 - Model with mathematics.**

Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high

school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts and formulas. They can analyze those relationships mathematically to draw conclusions. They routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.

**MATH.PRACTICE.MP5 - Use appropriate tools strategically.**

Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.

**MATH.PRACTICE.MP6 - Attend to precision.**

Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.

**MATH.PRACTICE.MP7 - Look for and make use of structure.**

Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see  $7 \times 8$  equals the well-remembered  $7 \times 5 + 7 \times 3$ , in preparation for learning about the distributive property. In the expression  $x^2 + 9x + 14$ , older students can see the 14 as  $2 \times 7$  and the 9 as  $2 + 7$ . They recognize the significance of an

existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects. For example, they can see  $5 - 3(x - y)^2$  as 5 minus a positive number times a square and use that to realize that its value cannot be more than 5 for any real numbers  $x$  and  $y$ .

**MATH.PRACTICE.MP8 - Look for and express regularity in repeated reasoning.**

Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing 25 by 11 that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through  $(1, 2)$  with slope 3, middle school students might abstract the equation  $(y - 2)/(x - 1) = 3$ . Noticing the regularity in the way terms cancel when expanding  $(x - 1)(x + 1)$ ,  $(x - 1)(x^2 + x + 1)$ , and  $(x - 1)(x^3 + x^2 + x + 1)$  might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain oversight of the process, while attending to the details. They continually evaluate the reasonableness of their intermediate results.

### III. Scope & Sequence

#### **Unit 1: Integers and Rational Numbers (7 Weeks):**

- Absolute Value
- Comparing and Ordering Integers
- Adding and Subtracting Integers
- Multiplying and Dividing Integers
- Properties of Numbers
- Fractions and Decimals
- Rational Numbers
- Adding and Subtracting Rational Numbers
- Multiplying Rational Numbers (Fractions and Decimals)
- Dividing Rational Numbers (Fractions and Decimals)

#### **Unit 2: Equations (6 Weeks):**

- Evaluating and Writing Algebraic Expressions (including Order of Operations)
- Simplifying Expressions
- Factoring Expressions
- Solving One-Step Equations (including Word Problems)
- Solving Two-Step Equations (including Word Problems)
- Distributive Property
- Solving Equations involving Distributive Property

#### **Unit 3: Inequalities (2 Weeks):**

- Graphing and Writing Inequalities
- Solving Inequalities by Adding and Subtracting
- Solving Inequalities by Multiplying and Dividing
- Solving Two-Step Inequalities
- Word Problems

#### **Unit 4: Ratios, Rates and Proportions (4 Weeks):**

- Ratios
- Rates/Unit Rates
- Complex Fractions
- Proportions
- Similar Figures
- Indirect Measurement

Maps and Scale Drawings  
Proportional Relationships

**Unit 5: Percents (4 Weeks):**

Percents, Decimals, Fractions  
Solving Percent Problems Using Proportions  
Solving Percent Problems Using Equations  
Applications of Percents (sales tax, tip, commission, markup, discount)  
Simple Interest  
Percent of Change/Percent of Error

**Unit 6: Geometry and Area (4 Weeks):**

Angle Measures (vertical, adjacent, supplementary, complementary)  
Drawing Geometric Figures/Drawing Triangles  
Area (parallelogram, triangle, trapezoid, composite figures)  
Circumference and Area of Circles

**Unit 7: Surface Area and Volume (3 Weeks):**

Three Dimensional Figures  
Surface Area of Right Prisms and Cylinders  
Volume of Right Prisms and Cylinders  
Cross Sections

**Unit 8: Analyzing Data (see Dynamic Mathematics 7 Curriculum)**

**Unit 9: Probability (see Dynamic Mathematics 7 Curriculum)**

## IV. Unit Descriptions

### Unit 1: Integers and Rational Numbers

#### Enduring Understanding

1. Rational numbers are a natural extension of the way that we use numbers.
2. Rational numbers include whole numbers, decimals, integers, and fractions.
3. Rational numbers allow us to solve problems that are not possible to solve with just whole numbers or integers.
4. Rational numbers have multiple interpretations.
5. Any rational number can be expressed as a fraction in a variety of ways.
6. Between any two rational numbers there are infinitely many rational numbers.

#### Essential Question(s)

1. How can we compare and order numbers?
2. How does the opposite of  $n$  differ from the absolute value of  $n$ ?
3. What happens when you add, subtract, multiply, or divide rational numbers?
4. How can counting, measuring, or labeling help to make sense of the world around us?
5. How are properties of numbers applied to problem solving?

#### Learning Objectives

Students will be able to:

1. Compare and order rational numbers (including integers, fractions and decimals).
2. Find and add opposites.
3. Add, subtract, multiply, and divide rational numbers.
4. Solve problems involving rational numbers.
5. Apply the properties of numbers.
6. Convert between fractions and decimals.

#### New Jersey Student Learning Standards

- **7.NS.1.** – Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram.
- **7.NS.1.a.** – Describe situations in which opposite quantities combine to make 0. For example, In the first round of a game, Maria scored 20 points. In the second round of the same game, she lost 20 points. What is her score at the end of the second round?
- **7.NS.1.b.** – Understand  $p + q$  as the number located a distance  $|q|$  from  $p$ , in the positive or negative direction depending on whether  $q$  is positive or negative. Show that

a number and its opposite have a sum of 0 (are additive inverses). Interpret sums of rational numbers by describing real-world contexts.

- **7.NS.1.c.** – Understand subtraction of rational numbers as adding the additive inverse,  $p - q = p + (-q)$ . Show that the distance between two rational numbers on the number line is the absolute value of their difference, and apply this principle in real-world contexts.
- **7.NS.1.d.** – Apply properties of operations as strategies to add and subtract rational numbers.
- **7.NS.2.** – Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers.
- **7.NS.2.a.** – Understand that multiplication is extended from fractions to rational numbers by requiring that operations continue to satisfy the properties of operations, particularly the distributive property, leading to products such as  $(-1)(-1) = 1$  and the rules for multiplying signed numbers. Interpret products of rational numbers by describing real-world contexts.
- **7.NS.2.b.** – Understand that integers can be divided, provided that the divisor is not zero, and every quotient of integers (with non-zero divisor) is a rational number. If  $p$  and  $q$  are integers, then  $-(p/q) = (-p)/q = p/(-q)$ . Interpret quotients of rational numbers by describing real-world contexts.
- **7.NS.2.c.** – Apply properties of operations as strategies to multiply and divide rational numbers.
- **7.NS.2.d.** – Convert a rational number to a decimal using long division; know that the decimal form of a rational number terminates in 0s or eventually repeats.
- **7.NS.3.** – Solve real-world and mathematical problems involving the four operations with rational numbers.
- **7.EE.3.** – Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies.

### Suggested Activities/Modifications

*Below is a list of suggested activities, modifications, accommodations, and enrichment opportunities. This includes, but is not limited to,:*

1. Activities
  - a. Do Now activities
  - b. Classwork

- c. Homework
  - d. Use of white boards
  - e. Quizzes/Unit Tests
  - f. Review Game
  - g. Project
  - h. Assistive Technology
  - i. PARCC Practice
2. English Language Learners.
    - a. Read written instructions.
    - b. Students may be provided with note organizers / study guides to reinforce key topics.
    - c. Model and provide examples
    - d. Extended time on assessments when needed.
    - e. Establish a non-verbal cue to redirect student when not on task.
    - f. Students may use a bilingual dictionary.
    - g. Pair Visual Prompts with Verbal Presentations
    - h. Highlight Key Words & Formulas
3. Special Education/504 Students.
    - a. Students may be provided with note organizers / study guides to reinforce key topics.
    - b. Extended time on assessments when needed.
    - c. Preferred seating to be determined by student and teacher.
    - d. Provide modified assessments when necessary.
    - e. Student may complete assessments in alternate setting when requested.
    - f. Establish a non-verbal cue to redirect student when not on task.
    - g. Maintain strong teacher / parent communication.
    - h. Repetition and practice
    - i. Pair Visual Prompts with Verbal Presentations
    - j. Provide Formulas
    - k. Check Use of Agenda
4. Gifted and Talented Students.
    - a. Use of Higher Level Questioning Techniques
    - b. Extension/Challenge Questions
    - c. Provide Assessments at a Higher Level of Thinking
    - d. Exploration Problems/Proofs

#### New Jersey Student Learning Standards - Technology

- 8.1.8.A.5 Select and use appropriate tools and digital resources to accomplish a variety of tasks and to solve problems.

### Career Readiness Practices

- CRP2. Apply appropriate academic and technical skills.
- CRP4. Communicate clearly and effectively and with reason.
- CRP6. Demonstrate creativity and innovation.
- CRP8. Utilize critical thinking to make sense of problems and persevere in solving them.
- CRP9. Model integrity, ethical leadership and effective management.
- CRP11. Use technology to enhance productivity.

### 9.2 Career Awareness, Exploration, and Preparation Content Area: 21<sup>st</sup> Century Life and Careers

#### Strand C: Career Preparation

- 9.2.8.B.3 Evaluate communication, collaboration, and leadership skills that can be developed through school, home, work, and extracurricular activities for use in a career.

### Career & Technical Education Content Area: 21<sup>st</sup> Century Life and Careers Standards

- 9.3.ST.2 Use technology to acquire, manipulate, analyze and report data.
- 9.3.ST-SM.4 Apply critical thinking skills to review information, explain statistical analysis, and to translate, interpret and summarize research and statistical data.
- 9.3.ST-SM.3 Analyze the impact that science and mathematics has on society.

## **Unit 2: Equations**

### Enduring Understanding

1. Algebraic expressions can be used to represent situations.
2. Two or more expressions may be equivalent, even when their symbolic forms differ.
3. A variable represents an unknown quantity and is used in problem-solving situations.
4. The equals sign indicates that two expressions are equivalent. It is often important to find the value of a variable for which two expressions represent the same quantity.
5. Finding the value of a variable for which two expressions represent the same quantity is known as *solving an equation*. There is exactly one solution to an equation.
6. The properties of equality are used to solve equations.

### Essential Question(s)

1. What does it mean to say that two quantities are equal?
2. How can you use numbers and symbols to represent mathematical ideas?
3. What are the steps involved in simplifying expressions?
4. How can the idea of a balance be used to solve an equation?
5. How can expressions and equations be used to solve real-world problems?

### Learning Objectives

Students will be able to:

1. Write and evaluate algebraic expressions.
2. Simplify algebraic expressions.
3. Factor algebraic expressions.
4. Solve one-step equations using addition, subtraction, multiplication, or division.
5. Solve two-step equations using inverse operations.
6. Solve equations using the distributive property.

#### New Jersey Student Learning Standards

- **7.NS.1.** – Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram.
- **7.NS.1.d.** – Apply properties of operations as strategies to add and subtract rational numbers.
- **7.NS.2.** – Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers.
- **7.NS.2.c.** – Apply properties of operations as strategies to multiply and divide rational numbers.
- **7.NS.3.** – Solve real-world and mathematical problems involving the four operations with rational numbers.
- **7.EE.1.** – Apply properties of operations as strategies to add, subtract factor, and expand linear expressions with rational coefficients.
- **7.EE.4.** – Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities.
- **7.EE.4.a.** – Solve word problems leading to equations of the form  $px + q = r$  and  $p(x + q) = r$ , where  $p$ ,  $q$ , and  $r$  are specific rational numbers. Solve equations of these forms fluently. Compare an algebraic solution to an arithmetic solution, identifying the sequence of the operations using each approach.

#### Suggested Activities/Modifications

*Below is a list of suggested activities, modifications, accommodations, and enrichment opportunities. This includes, but is not limited to,:*

1. Activities
  - a. Do Now activities
  - b. Classwork
  - c. Homework
  - d. Use of white boards

- e. Quizzes/Unit Tests
  - f. Review Game
  - g. Project
  - h. Assistive Technology
  - i. PARCC Practice

- 9.3.ST-SM.4 Apply critical thinking skills to review information, explain statistical analysis, and to translate, interpret and summarize research and statistical data.
- 9.3.ST-SM.3 Analyze the impact that science and mathematics has on society.

## **Unit 3: Inequalities**

### Enduring Understanding

1. An inequality is another way to describe a relationship between expressions; instead of showing that the values of two expressions are equal, inequalities indicate that the value of one expression is greater than (or greater than or equal to) the value of the other expression.
2. The properties of equality are used to solve inequalities.
3. In solving an inequality, multiplying or dividing both expressions by a negative number reverses the sign that indicates the relationship between the two expressions.
4. A number line shows that there are an infinite number of solutions to an inequality.

### Essential Question(s)

1. How can inequalities represent real-life situations?
2. How can the idea of a balance be used to solve an inequality?
3. How does one interpret the solution set to an inequality?
4. Do students use all four inequality symbols and related terminology correctly (at most, at least, up to, etc.)?
5. How do you represent an inequality on a number line?

### Learning Objectives

Students will be able to:

1. Graph, read, and write algebraic inequalities.

2. Solve inequalities by adding, subtracting, multiplying, or dividing.
3. Solve two-step inequalities using inverse operations.
4. Write and solve an inequality for real-life situations.

#### New Jersey Student Learning Standards

- **7.NS.1.** – Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram.
- **7.NS.1.d.** – Apply properties of operations as strategies to add and subtract rational numbers.
- **7.NS.2.** – Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers.
- **7.NS.2.c.** – Apply properties of operations as strategies to multiply and divide rational numbers.
- **7.NS.3.** – Solve real-world and mathematical problems involving the four operations with rational numbers.
- **7.EE.4.** – Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities.
- **7.EE.4.b.** – Solve word problems leading to inequalities of the form  $px + q > r$  or  $px + q < r$ , where  $p$ ,  $q$ , and  $r$  are rational numbers. Graph the solution set of the inequality and interpret it in the context of the problem.

#### Suggested Activities/Modifications

*Below is a list of suggested activities, modifications, accommodations, and enrichment opportunities. This includes, but is not limited to,:*

1. Activities
  - a. Do Now activities
  - b. Classwork
  - c. Homework
  - d. Use of white boards
  - e. Quizzes/Unit Tests

- 9.3.ST-SM.3 Analyze the impact that science and mathematics has on society.

## **Unit 4: Ratios, Rates, and Proportions**

### Enduring Understanding

1. A ratio is a comparison of two quantities by division. All ratios can be written in fraction form  $a/b$ .
2. All fractions are ratios, but not all ratios are fractions. Ratios are often used to make “part-part” comparisons, but fractions are not.
3. A unit rate is a measure of one quantity per unit of another quantity.
4. A proportion is a relationship of equality between two ratios. If one quantity in a ratio is multiplied or divided by a particular factor, then the other quantity must be multiplied or divided by the same factor to maintain the proportional relationship.
5. Similar figures, maps, and scale drawings have corresponding quantities that vary proportionally.
6. The graph of a proportional relationship is a straight line through the origin. The point (1, r) on the graph of any proportional relationship represents the unit rate. The unit rate is equivalent to the constant of proportionality.

### Essential Question(s)

1. How are equivalent ratios, values in a table, and ordered pairs connected?
2. What are the types/varieties of situations in life that depend on or require the application of ratios and proportional reasoning?
3. How can a complex fraction be simplified?
4. What is the difference between a unit rate and a ratio?
5. What is a proportion?
6. What characteristics define the graphs of all proportional relationships?

### Learning Objectives

Students will be able to:

1. Write ratios and use them to compare quantities.

2. Find unit rates and unit costs using proportional reasoning.
3. Test whether ratios form a proportion by using equivalent ratios and cross products.
4. Solve proportions using unit rates, mental math, and cross products.
5. Use proportions to find lengths in similar figures, solve problems involving scale and indirect measurement.
6. Identify proportional relationships and find constants of proportionality.
7. Represent proportional relationships on a graph.

#### New Jersey Student Learning Standards

- **7.RP.1.** – Compute unit rates associated with ratios of fractions, including ratios of lengths, areas and other quantities measured in like or different units.
- **7.RP.2.** – Recognize and represent proportional relationships between quantities.
- **7.RP.2.a.** – Decide whether two quantities are in a proportional relationship, e.g., by testing for equivalent ratios in a table or graphing on a coordinate plane and observing whether the graph is a straight line through the origin.
- **7.RP.2.b.** – Identify the constant of proportionality (unit rate) in tables, graphs, equations, diagrams, and verbal descriptions of proportional relationships.
- **7.RP.2.c.** – Represent proportional relationships by equations.
- **7.RP.2.d.** – Explain what a point  $(x, y)$  on the graph of a proportional relationship means in terms of the situation, with special attention to the points  $(0, 0)$  and  $(1, r)$  where  $r$  is the unit rate.
- **7.G.1.** – Solve problems involving scale drawings of geometric figures, including computing actual lengths and areas from a scale drawing and reproducing a scale drawing at a different scale.

#### Suggested Activities/Modifications

*Below is a list of suggested activities, modifications, accommodations, and enrichment opportunities. This includes, but is not limited to,:*

1. Activities
  - a. Do Now activities
  - b. Classwork
  - c. Homework
  - d. Use of white boards
  - e. Quizzes/Unit Tests
  - f. Review Game
  - g. Project
  - h. Assistive Technology

- i. PARCC Practice
2. English Language Learners.
  - a. Read written instructions.
  - b. Students may be provided with note organizers / study guides to reinforce key topics.
  - c. Model and provide examples
  - d. Extended time on assessments when needed.
  - e. Establish a non-verbal cue to redirect student when not on task.
  - f. Students may use a bilingual dictionary.
  - g. Pair Visual Prompts with Verbal Presentations
  - h. Highlight Key Words & Formulas
3. Special Education/504 Students.
  - a. Students may be provided with note organizers / study guides to reinforce key topics.
  - b. Extended time on assessments when needed.
  - c. Preferred seating to be determined by student and teacher.
  - d. Provide modified assessments when necessary.
  - e. Student may complete assessments in alternate setting when requested.
  - f. Establish a non-verbal cue to redirect student when not on task.
  - g. Maintain strong teacher / parent communication.
  - h. Repetition and practice
  - i. Pair Visual Prompts with Verbal Presentations
  - j. Provide Formulas
  - k. Check Use of Agenda
4. Gifted and Talented Students.
  - a. Use of Higher Level Questioning Techniques
  - b. Extension/Challenge Questions
  - c. Provide Assessments at a Higher Level of Thinking
  - d. Exploration Problems/Proofs

#### New Jersey Student Learning Standards - Technology

- 8.1.8.A.5 Select and use appropriate tools and digital resources to accomplish a variety of tasks and to solve problems.

#### Career Readiness Practices

- CRP2. Apply appropriate academic and technical skills.
- CRP4. Communicate clearly and effectively and with reason.
- CRP6. Demonstrate creativity and innovation.
- CRP8. Utilize critical thinking to make sense of problems and persevere in solving them.
- CRP9. Model integrity, ethical leadership and effective management.

- CRP11. Use technology to enhance productivity.

9.2 Career Awareness, Exploration, and Preparation Content Area: 21<sup>st</sup> Century Life and Careers  
Strand C: Career Preparation

- 9.2.8.B.3 Evaluate communication, collaboration, and leadership skills that can be developed through school, home, work, and extracurricular activities for use in a career.

Career & Technical Education Content Area: 21<sup>st</sup> Century Life and Careers Standards

- 9.3.ST.2 Use technology to acquire, manipulate, analyze and report data.
- 9.3.ST-SM.4 Apply critical thinking skills to review information, explain statistical analysis, and to translate, interpret and summarize research and statistical data.
- 9.3.ST-SM.3 Analyze the impact that science and mathematics has on society.

**Unit 5: Percents**

Enduring Understandings

1. A percent is a ratio that compares a number to 100.
2. Rational numbers can be expressed as fractions, decimals, and percents (ex  $\frac{1}{2} = 0.5 = 50\%$ ).
3. Proportions and/or equations can be used to solve real-world problems.
4. An understanding of “part” and “whole” is crucial in preventing errors while setting up proportions/equations.
5. An understanding of related vocabulary (tax, tip, discount, markup, commission, interest, etc.) must precede calculations and problem solving.

Essential Question(s)

1. How can percent help you understand situations involving money?
2. How are proportions and/or equations used in problems involving percent?
3. How can two amounts of change be the same but the percents of change be different?
4. How can percent help to make sense of the world around us?

Learning Objectives

Students will be able to:

1. Convert fractions, decimals, and percents.
2. Use proportions and equations to solve problems involving percent.
3. Find solutions to application problems involving percent such as tax, tip, commission, markup, discount, and simple interest.
4. Find percent of increase/decrease and percent error

### New Jersey Student Learning Standards

- **7.RP.3.** – Use proportional relationships to solve multi-step ratio and percent problems.
- **7.EE.2.** – Understand that rewriting an expression in different forms in a problem context can shed light on the problem and how the quantities in it are related.
- **7.EE.3.** – Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies.

### Suggested Activities/Modifications

*Below is a list of suggested activities, modifications, accommodations, and enrichment opportunities. This includes, but is not limited to,:*

1. Activities
  - a. Do Now activities
  - b. Classwork
  - c. Homework
  - d. Use of white boards
  - e. Quizzes/Unit Tests
  - f. Review Game
  - g. Project
  - h. Assistive Technology
  - i. PARCC Practice
2. English Language Learners.
  - a. Read written instructions.
  - b. Students may be provided with note organizers / study guides to reinforce key topics.
  - c. Model and provide examples
  - d. Extended time on assessments when needed.
  - e. Establish a non-verbal cue to redirect student when not on task.
  - f. Students may use a bilingual dictionary.
  - g. Pair Visual Prompts with Verbal Presentations
  - h. Highlight Key Words & Formulas
3. Special Education/504 Students.
  - a. Students may be provided with note organizers / study guides to reinforce key topics.
  - b. Extended time on assessments when needed.
  - c. Preferred seating to be determined by student and teacher.
  - d. Provide modified assessments when necessary.

- e. Student may complete assessments in alternate setting when requested.
  - f. Establish a non-verbal cue to redirect student when not on task.
  - g. Maintain strong teacher / parent communication.
  - h. Repetition and practice
  - i. Pair Visual Prompts with Verbal Presentations
  - j. Provide Formulas
  - k. Check Use of Agenda
4. Gifted and Talented Students.
- a. Use of Higher Level Questioning Techniques
  - b. Extension/Challenge Questions
  - c. Provide Assessments at a Higher Level of Thinking
  - d. Exploration Problems/Proofs

- 9.3.ST-SM.3 Analyze the impact that science and mathematics has on society.

## Unit 6: Geometry

### Enduring Understandings

1. The measure of an angle describes the opening between the two sides, or rays, that form the angle. It does not depend on the lengths of the sides.
2. The sum of any two sides of a triangle must be greater than the third side. The sum of the angles of a triangle is 180 degrees.
3. Any side of a parallelogram or triangle can be its base. The base and the height of any polygon are always perpendicular to each other.
4. A composite or irregular figure is made up of familiar figures for which we have the tools to find area and perimeter.
5. The ratio of the circumference of a circle to its diameter is pi. Pi is approximately 3.14 or  $\frac{22}{7}$ .
6. The area of a circle is the product of the circumference of that circle and its radius.

### Essential Question(s)

1. How do geometric relationships help us to solve problems?
2. Why are vertical angles congruent?
3. How are complementary angles different from supplementary angles?
4. How can solving equations be applied to angle relationships?
5. How do you determine whether a triangle can be formed?
6. What are the various types and properties of triangles?
7. How is the circumference of a circle used to derive the area of a circle?

### Learning Objectives

Students will be able to:

1. Identify different pairs of angles.
2. Write and solve equations to find unknown angle measures.
3. Determine whether a unique triangle, more than one triangle, or no triangle can be formed when given three measurements.
4. Find the areas of parallelograms, triangles, trapezoids, and composite figures.
5. Find the circumference and area of a circle.

### New Jersey Student Learning Standards

- **7.EE.4.** – Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities.
- **7.G.2.** – Draw (with technology, with ruler and protractor as well as freehand) geometric shapes with given conditions. Focus on constructing triangles from three measures of

angles or sides, noticing when the conditions determine a unique triangle, more than one triangle, or no triangle

- **7.G.4.** – Know the formula for the area and circumference of a circle and use them to solve problems; give an informal derivation of the relationship between the circumference and area of a circle.
- **7.G.5.** – Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write and solve simple equations for an unknown angle in a figure.
- **7.G.6.** – Solve real-world and mathematical problems involving area, volume, and surface area of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms.

### Suggested Activities/Modifications

*Below is a list of suggested activities, modifications, accommodations, and enrichment opportunities. This includes, but is not limited to,:*

1. Activities
  - a. Do Now activities
  - b. Classwork

## Unit 7: Surface Area and Volume

### Enduring Understandings

1. Prisms and pyramids have faces that are flat surfaces.
2. The surface area of a three-dimensional solid is the sum of the areas of its faces.
3. You can find the volume of any prism by multiplying its base area (B) by the height (h) of the solid.
4. A cross section is the two-dimensional shape you see after slicing through a three-dimensional object.

### Essential Question(s)

1. How can spatial relationships be described by careful use of geometric language?
2. How can knowledge of three-dimensional objects help us understand the world around us?
3. How are area and volume properties related?
4. How do prisms compare to pyramids of the same base?

### Learning Objectives

Students will be able to:

1. Classify and draw three-dimensional figures.
2. Find the surface area of prisms and pyramids.
3. Find the volume of prisms and pyramids.
4. Describe and draw cross sections that result from slicing three-dimensional figures.

### New Jersey Student Learning Standards

- **7.EE.4.** – Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities.
- **7.G.3.** – Describe the two-dimensional figures that result from slicing three-dimensional figures, as in plane sections of right rectangular prisms and right rectangular pyramids.
- **7.G.6.** – Solve real-world and mathematical problems involving area, volume, and surface area of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms.

### Suggested Activities/Modifications

*Below is a list of suggested activities, modifications, accommodations, and enrichment opportunities. This includes, but is not limited to,:*
